UR INVOLVED

Course: ENSE 281 – Winter 2026

Instructor: Tim Maciag

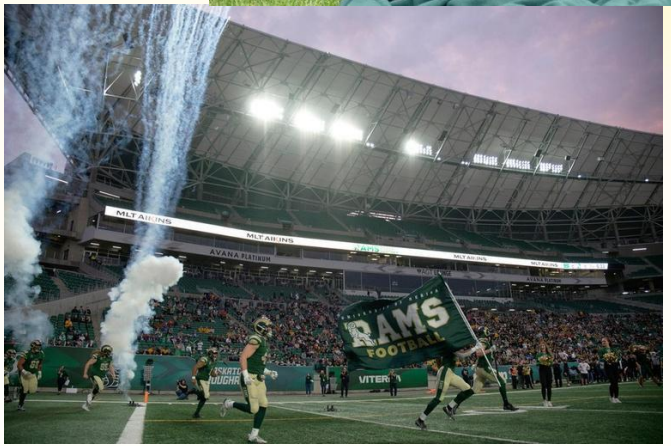
Members: Robert Calinescu, Harleen Kaur, Abraham Omoregie, Peyton Bowen, Luka Dundjerovic

Recap: What is UR-Involved?

UR-Involved is a web platform that helps students:

- ***Discover and explore university clubs***
- ***Easily submit request to join clubs***
- ***Submit requests to create new clubs***

It also supports both club-level and system-level management, making it easier to organize and manage student communities.



Why did we build this?

- Club information is not centralized and is hard to access
- Students depend on posters, social media, or word of mouth
- There is no single platform to discover, join, or create clubs

Student Clubs, Groups, and Societies

This list of student clubs, groups, and societies is not comprehensive, and is in development. Do you operate a student club, group, or society that is not yet on the list? Please contact the Student Success Centre.

Psychology Students' Association - email Facebook

Who is this for?

Guests

- Browse clubs
- View club details

Students

- Register/Log in
- Browse clubs & view details
- Request to join clubs
- Submit club creation requests
- Track requests in dashboard

Club Admins

- View join requests
- Approve or reject members
- Manage their club

System Admin

- Approve or reject club requests
- View registered users
- Delete accounts if needed

DEMO

Core MVP Functionality

User Features

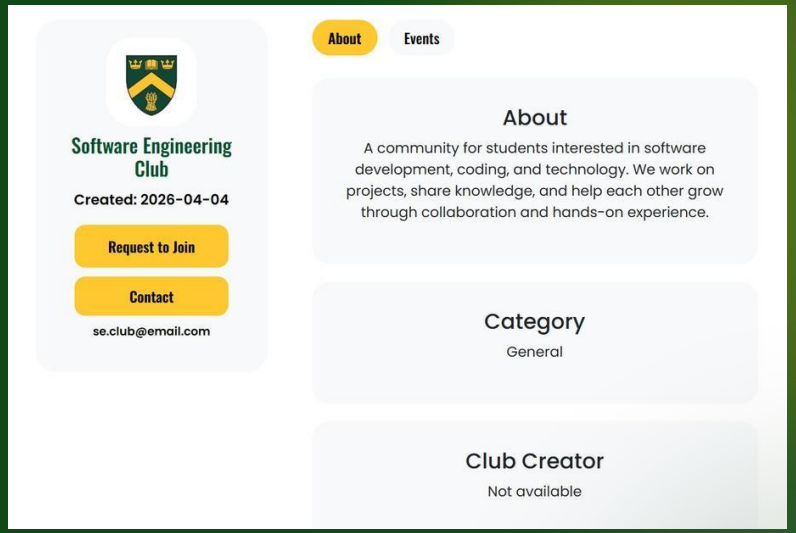
- Registration and login
- Browse, search, and filter clubs
- View club details
- Submit and track join requests

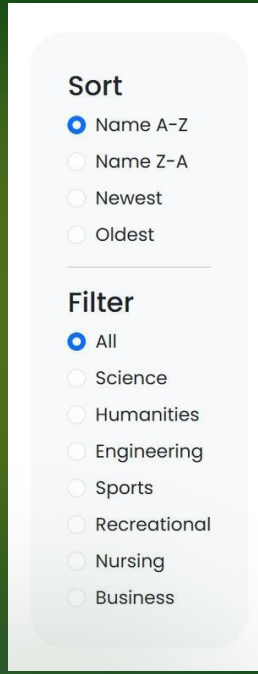
Club Management

- Club admins review join requests
- Manage club membership

System Management

- Admin dashboard for club creation requests
- User Account Management





Architecture and Implementation

View: EJS, HTML, CSS, Bootstrap, JavaScript

Controller: Node.js, Express

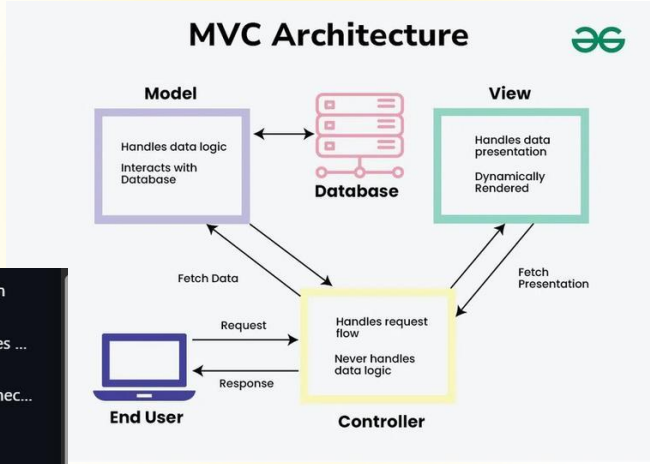
Model: MongoDB, Mongoose

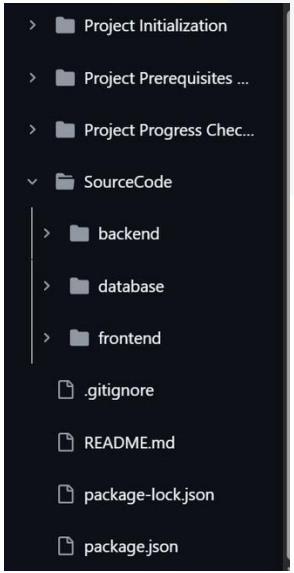
Authentication: Passport.js (sessions)

Design Approach

We followed the MVC architecture from our labs, separating the frontend, backend logic, and database.

This made the system more organized, easier to maintain, and scalable.





Why this is an MVP and what comes next

- Solves the core problem in a simple, usable way Supports end-to-end
- role-based workflows (students, admins, system admin) Provides the essential
- features: browsing, joining, and managing clubs

What’s Next:

- Add event management features
- Improve club management tools
- Enhance UI/UX and overall polish

THANK YOU
