  - View membership request status
  - View club events

Requirements Overview

- Club Creation & Administration
  - Submit club proposals
  - Admin approve/reject clubs
  - Approved clubs added to directory
- Input Validation
  - Required field validation
  - Clear user error messages
  - Access control for protected features

System Architecture & Project Scope

Model-View-Controller (MVC) Architecture

- Model: MongoDB + Mongoose
- View: HTML, CSS, Bootstrap, JavaScript, EJS
- Controller: Node.js + Express.js
- Authentication: Passport.js

Core System Features

- Centralized club directory
- Club detail pages with events
- Search and Filtering
- User authentication system
- Join club request workflow
- Club creation proposal workflow
- Role-based Access Control

Project Boundaries

- no U of R system integration
- no payment processing
- no mobile application
- no real-time social media integration
- no production deployment

User Roles

Our plan is to have 4 types of users, in order of impact on the site:

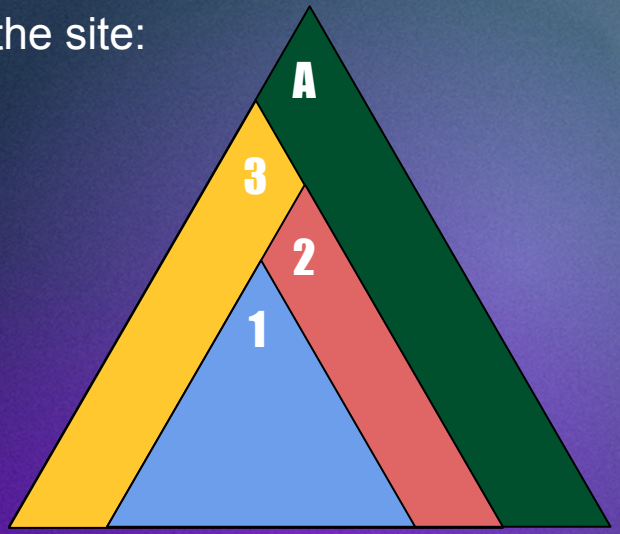
-(A)Administrators: Executive control over site.

-(3)Club Organizers: Can manage respective club.

-(2)Students: Can join clubs.

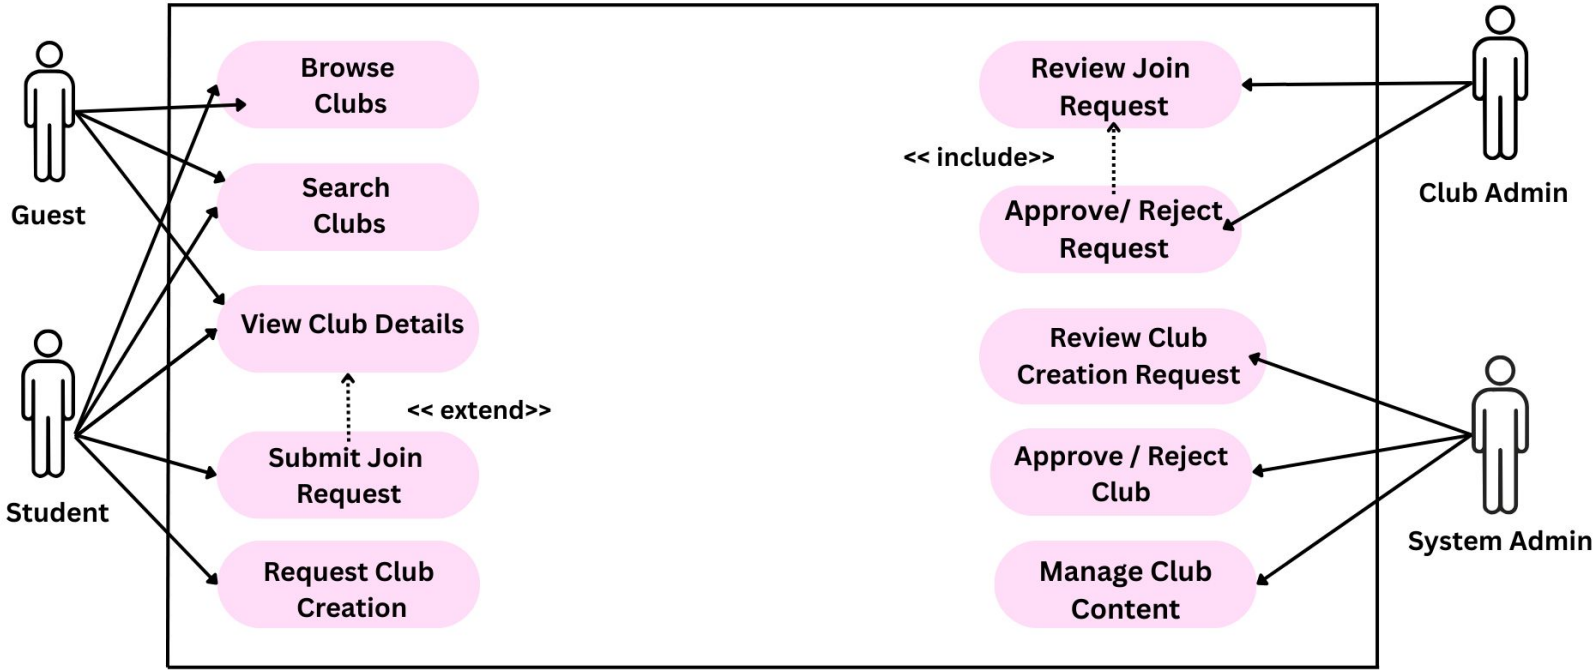
-(1)Guests: Can only view information.

In addition, users have access to anything that below users can do.

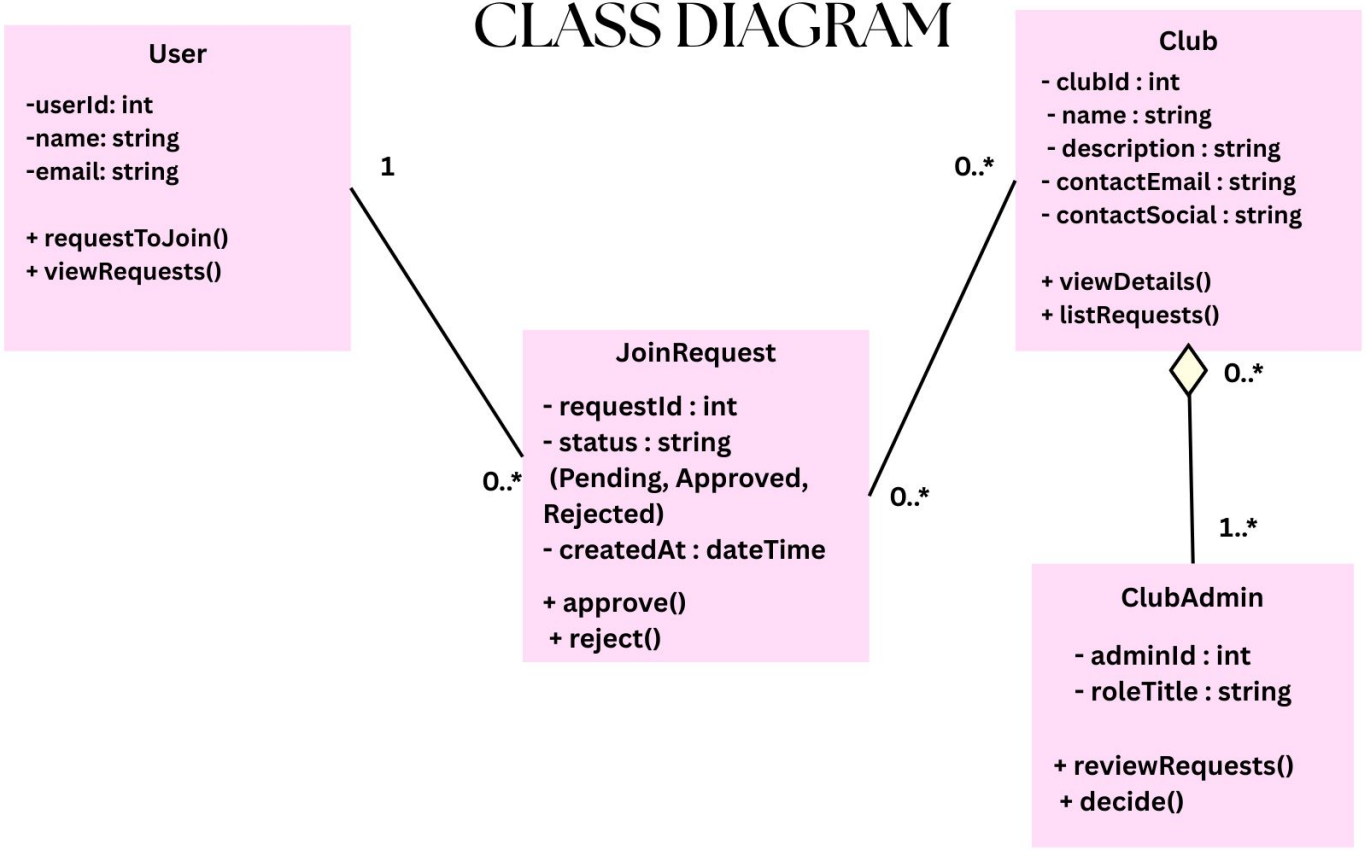


The capabilities of role 3 encompass itself, along with roles of lower number.

USE CASE DIAGRAM

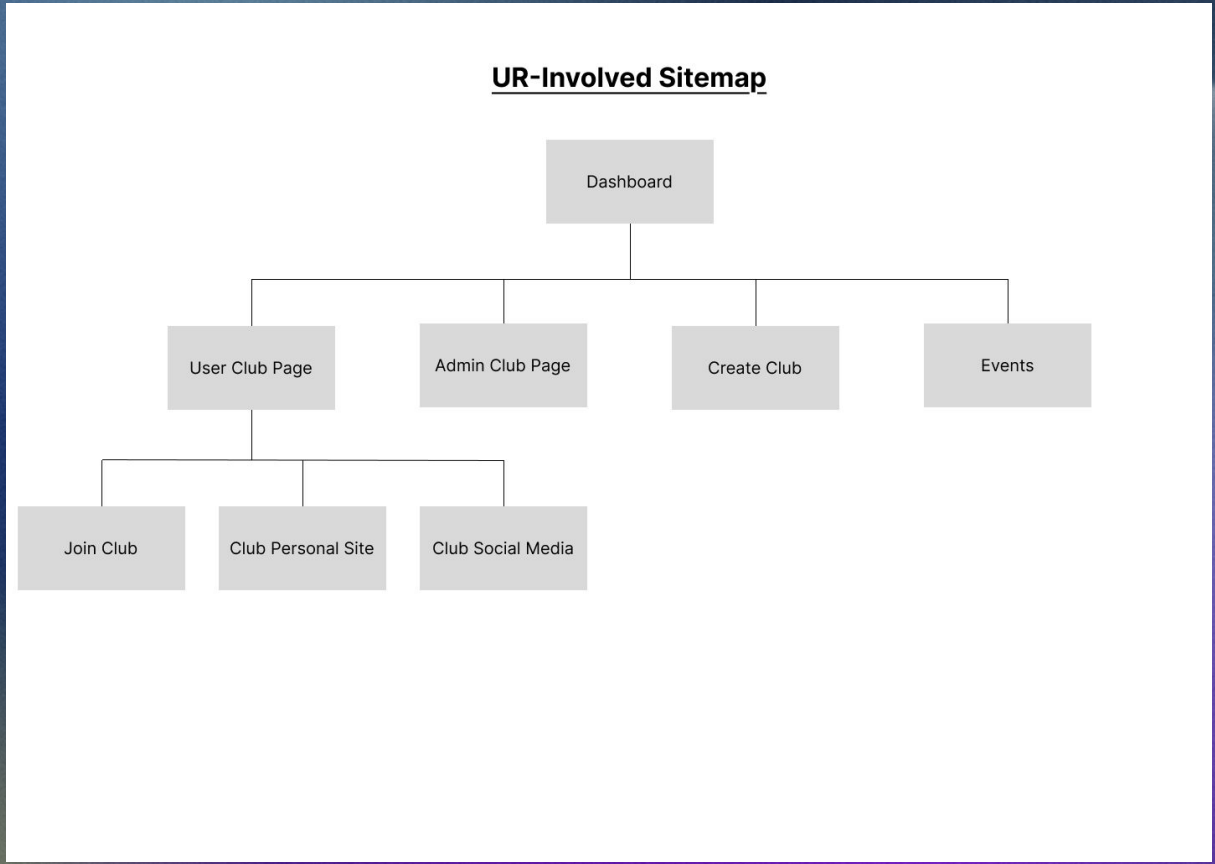


CLASS DIAGRAM



Design and Layout

- Each club will have club details page. Club details page will include events, news and request to join tabs
- We will look at the most important pages next



Prototype

Questionnaire

Based on this club detail page, would you feel you have enough information to decide whether to join a club?

What are your opinions on the lofi prototype so far. Any recommendations?

Would you add/remove anything from the current site map?

What parts of the design did you like?

What parts of the design did you dislike?

Is there anything else we should add to the dashboard?
